
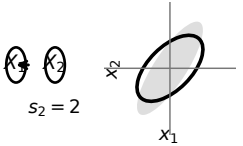
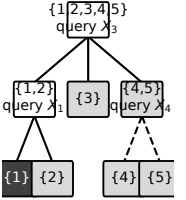
If $X_1 \to X_2$:
target reached, KL 0

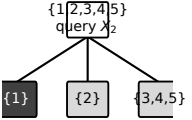


If $X_2 \to X_1$:
no effect, still optimal,
KL 0.25

Balance rule:
2 queries



One-step rule:
1 query



stopping at a shared action removes only the dashed query

grey: target Q; outline: result of the same action, $s = (1, 2)$

scale X_1 by 2
scale X_2 by 0.72
no shared action
